DETAILED ACTION

*Allowable Subject Matter*

1. Claims 1-3,5,7-10,12-19,2134,36-38 are allowed.
2. The following is an examiner's statement of reasons for allowance: Applicant's arguments have been acknowledged and are persuasive. The prior art cited of record does not anticipate individually or teach in combination the following limitations:
  - A light source apparatus for a vehicle headlight, comprising: a base; a plurality of LED elements located adjacent the base; and a light shielding device located adjacent the base and formed in the shape of a light distribution pattern, wherein the LED elements are arranged in such a manner as to correspond to the shape of the light shielding device, and in such a manner as to form an emission shape suited for a light distribution pattern for a vehicle headlight, and at least some of the LED elements are arranged along a given ridgeline wherein the given ridgeline extends substantially parallel with at least a portion of an edge of the light shielding device, at least one of the LED elements is different in size as compared to another of the LED elements, and at least a relatively smaller one of the LED elements is located closer to the edge of the light shielding device than at least a relatively larger one of the LED elements.
  - A light source apparatus for a vehicle headlight, comprising: a base; a plurality of LED elements located adjacent the base; and a light shielding device located adjacent the base and formed in the shape of a light distribution pattern, wherein the LED elements are arranged in such a manner as to correspond to the shape

of the light shielding device, and in such a manner as to form an emission shape suited for a light distribution pattern for a vehicle headlight, and at least some of the LED elements are arranged along a given ridgeline, wherein the given ridgeline extends substantially parallel with at least a portion of an edge of the light shielding device, and each of the LED elements is substantially triangular in exterior shape.

- A light source, comprising: a base; a plurality of LED elements located adjacent the base and formed in a non-symmetrical array such that light emitted from the LED elements forms a light distribution pattern, wherein the light source has an optical axis located at a position in the substantial center of the array of LED elements and along which light is directed from the LED elements, and the array of LED elements is non-symmetrical about the optical axis, wherein uppermost LED elements of the entire array of LED elements are arranged in two linear rows, the rows being arranged at a given angle with respect to each other, and the given angle is between approximately 15 and 45 degrees.
- A light source, comprising: a base; a plurality of LED elements located adjacent the base and formed in a non-symmetrical array; and a light shielding device located adjacent the base and configured to cut off light from the LED elements into the shape of a low beam light distribution pattern, the light shielding device having a first edge and a second edge extending diagonally from the first edge; and wherein one side of each of at least some of the LED elements is arranged in parallel with the first edge of the light shielding device; and the light source has

a center bottom portion having a higher brightness portion as compared to other portions of the light source.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
